

JUSTIN GOH

+65 9641 1288 | justingohzk@gmail.com | [linkedin.com/in/gohgohthejustin](https://www.linkedin.com/in/gohgohthejustin)

AI-focused product builder with cross-functional experience across regulatory tech, AI systems, and operational tooling. I turn ambiguous problems into shippable products, pairing user discovery and first-principles thinking with the technical depth to scope and validate what is built.

EDUCATION

National University of Singapore (NUS)

Aug 2024 – Dec 2027

Bachelor of Computing (Honours), Major in Business Artificial Intelligence Systems; Minor in Management

- Penultimate Year of Study | Expected Graduation: Dec 2027
- **Selected Coursework:** Data Structures & Algorithms; Full-Stack Software Engineering for AI Solutions II; Object-Oriented Programming (Java); Data Management & Visualisation; Digital Product & Media Marketing; Machine Learning & AI I.
- **Product & Strategy:** Product discovery, user research, roadmapping, prioritisation, stakeholder management, UAT, build-vs-buy analysis, PRDs, Agile/Scrum, Jira
- **Technical and Analytics:** Python, SQL, Java, R; Flask, Django; Docker, Git, n8n; LLM/GenAI integration, prompt design, Tableau, GA4,

RELEVANT EXPERIENCE

Infocomm Media Development Authority (IMDA)

Singapore

Product Management & Quality-of-Experience Research Intern — Punggol Digital District

Jan 2026 – June 2026

- Owned the QoE benchmarking workstream for Punggol Digital District's autonomous-robotics rollout. Translating an ambiguous regulatory question (how to assess real-world robot performance) into a structured testing framework and evaluation criteria mapped across industry standards (TCREI, QualMRI, TR103-559).
- Drove end-to-end UAT cycles across cross-functional stakeholders (Umlaut, Accenture, IMDA, GovTech), prioritising testing-roadmap gaps and authoring structured proposals that were adopted by the team.
- Designed and ran experiments on heterogeneous hardware (IXIA, Raspberry Pi, TurtleBot 4) to quantify latency, connectivity, and UX failure modes — turning the results into go/no-go recommendations on standards adoption for the district.

Connecting World Trade (CWT Globelink)

Singapore

Software Engineer Intern

Feb 2024 – Apr 2024

- Identified the highest-leverage bottleneck in the reporting pipeline through stakeholder interviews and shipped a Gen-AI-assisted query layer (Oracle APEX, PL/SQL) that cut report-generation time by ~20%; measured impact via before-and-after cycle-time tracking.
- Coordinated with operations and engineering leads to scope, prioritise, and deploy new features and bug fixes to production within the first two weeks — owning the feedback loop from release through user follow-ups.
- Authored a lightweight build-vs-buy analysis feature on internal tooling alternatives, presenting trade-offs and automation ROI estimates to the engineering lead.

National University of Singapore

Singapore

Undergraduate Teaching Assistant- BT2102: Data Management & Visualisation

Aug 2025 – May 2026

- Selected across multiple semesters to lead weekly labs for 30+ first-year students on SQL, relational modelling, and Tableau dashboarding — practising the skill of explaining technical reasoning to non-technical audiences.

PROJECTS

Grounded – Creator | *Flask, Socket.IO, Groq, MediaPipe, Stripe*

2026

- Built a real-time interview-prep web app that evaluates answers across speaking style, content, and body language, fusing streaming speech-to-text, MediaPipe pose/face signals, and LLM rubric scoring into per-session reports, with resume-aware coaching layered on top
- Engineered the full production stack — live media orchestration over Socket.IO, SQLite session persistence, Google OAuth, and Stripe-gated Free/Pro entitlements enforced server-side — deployed on Railway.

Claim-Integrity Agent — OpenAI × SEA Hackathon | *React, TypeScript, Express, OpenAI Vision*

2026

- Built a human-in-the-loop refund-fraud triage layer for a Shopee-style marketplace, fusing three confidence-weighted signals — vision-model plausibility, perceptual-hash image-reuse, and behavioural heuristics — into one explainable 0–100 Risk Score.
- Made cross-account image reuse the core moat (perceptual hashing across claims and accounts), and regression-gated the aggregator so legitimate false-positive anchors stayed correctly low-risk.

LutherAIBot — Product Manager | *Vertical B2B AI SaaS for Financial Advisors | Openclaw*

In Development, 2026

- Ran product discovery across the FA workflow: interviewed financial advisors and their PAs to map pain-points, then scoped an MVP around the core use case — one PA supporting multiple advisors — focused on client-logistics and CRM automation
- Productised an open-source agent platform (OpenClaw) into a deployable PA-facing tool, making deliberate trade-offs to keep regulated workflows reliable and PDPA-compliant.

AuroraMart — NUS IS2108 | *Django, SQLite, RESTful APIs*

2025

- Full development, launch, documentation and mapping of product and end-to-end user flows for a Django/SQLite e-commerce platform — from discovery to checkout, with documented specs covering authentication, inventory state transitions, and payment edge cases.

Certifications and Co-Curricular Activities

IBM Product Management Professional Certification

2026

Google AI Professional Certification

2026

NUS Product Club, Member (Incoming, Summer Intake),

2026 – Present

- Joining NUS's flagship student-run community for product management.
